Ayrton San Joaquin

RESEARCHER - TRUSTWORTHY MACHINE LEARNING (PRIVACY, SECURITY) | WRITER

ayrton@yale-nus.edu.sg | Copenhagen, Denmark | ajsanjoaquin| ajsanjoaquin.github.io

Education

Yale-NUS College *Singapore*

BACHELOR OF SCIENCE (HONORS) IN DATA SCIENCE, MINOR IN PHILOSOPHY *August 2018 - February 2023*

Awarded Scholarship to attend Full-time. Currently on exchange at Københavns Universitet.

Experience

Machine Learning Safety Scholars Program, Center for AI Safety *Palo Alto, United States*

TEACHING ASSISTANT (FALL), SCHOLAR (SUMMER) *June 2022 - December 2022*

- Led a 5-person grading team handling 97 students worldwide, ranging from pre-university students to professionals.
- Led research on analyzing large language models' adaptability to new word definitions using few-shot learning.
- Received a grant of $4500 to complete the inaugural program.

Data Privacy and Trustworthy Machine Learning Lab, NUS *Singapore*

UNDERGRADUATE RESEARCHER *May 2021 - August 2021*

- Pitched and led a project to analyze Unlearnable Data as a data protection method.
- Collaborated with Google Brain on privacy attack research for my bachelor's thesis in a team across 4 timezones. Published as the youngest and only undergraduate co-author.

Arterys (Freelance) *San Francisco, United States*

DEEP LEARNING ENGINEER *March 2020 - June 2020*

- Created a COVID-19 Pneumonia classifier four days after pandemic declaration in collaboration with A.I. Singapore.
- Collaborated with Arterys to deploy the model in their platform for use by American hospitals and researchers. Model engineer in a team of 4 accross 3 timezones.

Open-Source Projects & Contributions

Equitable Valuation of Data Using Shapley Values *Data Protection*

• Implemented the training data valuation algorithm from *What is your data worth? Equitable Valuation of Data (Ghorbani and Zou., 2019)*.

Explaining Neural Networks with Meaningful Perturbations *Explainable AI*

• For explaining an image classifier's prediction, I implemented the algorithm described in *Explanations of Black Boxes by Meaningful Perturbation (Fong, et. al., 2018)*.

COVID-19 Pneumonia Classifier for Diagnosis Triage *Medical Imaging*

• Trained a Resnet-34 Convolutional Neural Network (CNN) on ~ 26,000 images with Resampling to detect Pneumonia caused by COVID-19 on xray scans ultimately to triage patients for urgent diagnosis.

Miscellaneous *Machine Learning Community*

• Added new features for major machine learning projects including Pytorch, HuggingFace Transformers, and YOLOv4 (object detection model).

Publications

December 2022	**San Joaquin, A.,** Haroen, A. , Understanding How Model Size Affects Few-shot Instruction Prompting	*arχiv*
December 2022	**San Joaquin, A.,** Skubacz, F. , Applying Multilingual Models to Question Answering (QA)	*arχiv*
November 2022	Tramer, F., ..., **San Joaquin, A.,** et.al. , Truth Serum: Poisoning Machine Learning Models to Reveal Their Secrets	*ACM CCS 2022*
March 2020	**San Joaquin, A.**, *Using Deep Learning to Detect Pneumonia caused by COVID-19*	*Towards Data Science (Editor's Choice)*

Press

April 2022 **Machine learning models leak personal info if training data is compromised**, *The Register*

Skills

Programming Languages: Python, Java, R
Machine Learning in Python: Pytorch, Pytorch Lightning, NumPy, Sickit-Learn, Tensorflow, Keras, Jax
Data Management: Pandas, SQL, MS Excel
Application Deployment & Version Control: Docker, Google Cloud, Git, Singularity
