Ayrton San Joaquin

ayrton@u.yale-nus.edu.sg | +65 881475 88 | Singapore | ajsanjoaquin.github.io

Education

Yale-NUS College — *Singapore*

Bachelor of Science (Honors) in Data Science, Minor in Philosophy — *August 2018 – May 2022*

Awarded Scholarship to attend Full-time

Coursera

Certificate in Machine Learning (Credential ID: WFK75DQC9N5Q) — *July 2019*

Experience

NeXT++ — *Singapore*

Deepfake Detection Research Intern — *May 2020 – August 2020*

- Preprocessed 200,000 images from FaceForensics++ Dataset and trained various detector models (Based on EfficientNet and Xception Net) using a High Performance Computing Cluster
- Read about, and adapted, various robustness strategies against adversarial noises

Arterys (Freelance) — *San Francisco, United States*

Deep Learning Engineer (Volunteer) — *March 2020 – June 2020*

- Created a COVID-19 Pneumonia classifier four days after pandemic declaration, and developed it on an IBM Power9 System provided by A.I. Singapore.
- Contacted by Arterys, and Deployed model in the Arterys platform for use by American hospitals and researchers. (https://marketplace.arterys.com/model/ayrtoncovidXR)

Computational & Systems Biology Research Cluster, Yale-NUS College — *Singapore*

Research Assistant — *September 2018 – May 2020*

- Packaged scobraPy to PyPI used by dozens of undergraduates every year.
- Routinely curate metabolic models by sifting through thousands of reactions and adding hundreds of missing reactions to produce essential biomasses.

Skills

Programming Languages: Python, R, Ocaml
Machine Learning in Python: NumPy, Sickit-Learn, Pytorch, Fastai
Data Management: Pandas, SQL, MS Excel
Application Deployment & Version Control: Docker, Google Cloud, Git, Singularity

Projects

COVID-19 Pneumonia Classifier for Diagnosis Triage — *Fastai, Pytorch, Pandas, Docker*

• Trained a Resnet 34 Convolutional Neural Network (CNN) on ~ 26,000 images with Resampling to detect Pneumonia caused by COVID-19 on xray scans and triage patients for urgent diagnosis. — *https://github.com/ajsanjoaquin/COVID-19-Scanner*

Pneumothorax Classifier — *Fastai, Pytorch, Pandas*

• Made a binary image classifier trained on a Resnet 50 CNN and ~11,000 x-ray images to detect Pneumothorax (collapsed lung) for the NUS-MIT Critical Care Datathon. Accuracy of ~87%. — *https://github.com/ajsanjoaquin/Pneumothorax*

Publications

March 2020 **Using Deep Learning to Detect Pneumonia caused by COVID-19**, *Towards Data Science*

January 2020 **Three Things I learned from Creating Fake Faces Using A.I.**, *The Startup*

July 2019 **Creating a Radiologist from Scratch**, *Towards Data Science*
